Halley Patel

AssociateProductManager | Product Analytics | AI & Experimentation

+91-9638349044 halley1837patel@gmail.com
Halley Patel halley2904

Summary

Data-driven product professional with hands-on experience translating ambiguous problems into measurable product requirements, evaluation frameworks, and working workflows. Experienced in analyzing 15,000+ records, defining product success metrics, evaluating AI systems across 7,500+ images, and building experimentation and regression frameworks using 712 expert-reviewed cases. Strong in product discovery, user/problem understanding, data analysis, stakeholder collaboration, AI/RAG workflows, and technical product delivery.

Education

Indian Institute of Technology Madras *2023 - 2025*
Diploma in Data Scien ce and Applications - CGPA: 8.40/10

Gujarat University *2022- 2025*
Bachelors of science in Data Science - CGPA: 7.50/10

Experience

Data Scientist **Mar 2026 – Present**
Radinate -Healthcare AI startup *Ahmedabad, India*

AI Product - Payer / ACR Concordance

• Owned product definition for an AI decision-support workflow, translating an ambiguous operational problem into structured product requirements, evaluation criteria, and measurable workflows

• Translated domain guidelines and business rules into product requirements and system workflows while balancing accuracy, usability, explainability, and implementation constraints.

• Defined product success metrics and evaluation criteria to assess AI-supported authorization outcomes against standardized evidence.

•Worked directly with domain SMEs and engineering teams to resolve product, accuracy, usability, and implementation trade-offs and drive workflow delivery.

Readmission Risk Governance

•Analyzed production-model performance across 15,000+ clinical records, identifying a 53% miss rate on high-risk cases and using structured analysis to inform a redesigned risk framework.

• Redesigned evaluation criteria and the model-risk framework, reducing false positives by 52%.

• Established a continuous third-party vendor monitoring workflow by defining confidence-based flagging criteria, supporting repeatable governance and ongoing quality review by clinical risk teams.

Data Science & ML Intern **Sep 2025 – Mar 2026**
Radinate -Healthcare AI startup *Ahmedabad, India*

Clinical AI Evaluation & Monitoring

• Established model-performance success metrics of 0.90 / 0.87 AUROC and tracked post-deployment outcomes, translating technical confidence scores into decision-ready monitoring signals for clinical stakeholders.

• Evaluated a vision-language model across 7,500+ images, identifying output-reliability gaps and driving requirement improvements that expanded structured extraction from 9 to 16 clinical entities.

LLM Evaluation, Benchmarking & Reliability Framework

• Enabled reliable AI release decisions through a benchmarking framework built on 712 expert-reviewed ground-truth cases, defining quality metrics and regression tests across model versions.

• Built a data pipeline converting unstructured inputs into decision-ready structured datasets with 0.87 F1, enabling downstream product experimentation and evaluation at scale.

Projects

PayorLens – AI Product Evaluation & Governance Platform

• Defined product vision, roadmap, requirements, and evaluation capabilities for an AI governance platform supporting risk, compliance, and clinical stakeholders.

• Built and shipped a working FastAPI + Streamlit AI product end-to-end, owning specifications, edge-case testing, evaluation logic, and the requirements-to-release workflow.

•Converted technical model outputs into actionable product and governance decisions through structured evaluation and risk narratives

ScopeGuard - AI Scope-Change Assessment

• Owned product discovery and V1 definition for an AI scope-change assessment workflow, translating an ambiguous business problem into requirements, decision logic, and evidence-grounded outputs.

• Designed and shipped a 6-screen interactive prototype covering analysis, comparison, evidence review, decisioning, and report generation, including happy-path and uncertainty workflows.

• Defined AI guardrails, output schemas, evaluation criteria, and unsupported-claim controls to improve traceability, explainability, and human-review readiness.

WhatsApp - Product Strategy Teardown

• Reframed WhatsApp's expansion risk from feature proliferation to context collision by analyzing 6 major product contexts across messaging, Communities, Updates, Channels, Business and Payments, and mapping their user jobs and strategic tradeoffs.

• Developed 3 product recommendations and a testable commercial-growth experiment by evaluating monetization, cognitive load and core-experience tradeoffs, with defined success and trust guardrail metrics.

Technical Skills

Product: Product Discovery, Requirements Gathering, PRDs, Product Specifications, Product Roadmaps, Workflow Design, User Journey Mapping, Product Analytics, Experimentation, Stakeholder Alignment, Figma
Data & AI: Data Analysis, AI Evaluation, Model Benchmarking, Regression Testing, Model Monitoring, RAG, Prompt Engineering, AI Agents, Agentic Workflows, LLM APIs
Technical: Python, SQL, FastAPI, REST APIs, Data Pipelines, Streamlit, Automation
Collaboration: Engineering Collaboration, Technical Documentation, Product Handoffs, Stakeholder Communication

Certificates

• IBM - Enterprise Design Thinking Practitioner
• Anthropic - Introduction to Model Context Protocol
